AirNova — Sofia Air Quality Dashboard

Real-time $PM_{2.5}$ monitoring and short-term forecasts for Sofia BG

What is $PM_{2.5}$?

$PM_{2.5}$ refers to **fine particulate matter** smaller than 2.5 micrometers — about 30 times thinner than a human hair. These particles come from **vehicles, heating, and industry** and can **penetrate deep into the lungs,** affecting respiratory and cardiovascular health.

$PM_{2.5}$ (µg/m³)	Air Quality	Health Impact
0–12	Good	Air quality is satisfactory and poses little or no risk.
12.1–35.4	Moderate	Acceptable; sensitive groups may experience mild effects.
35.5–55.4	Unhealthy (Sensitive)	Children & elderly should limit prolonged outdoor activity.
55.5–150.4	Unhealthy	Everyone may begin to experience adverse health effects.
150.5+	Very Unhealthy	Serious health effects for all populations.
